CONNXUS® API Access

API Implementation

ConnXus provides direct, programmatic access to your corporation's ERP data and services using simple and powerful application programming interfaces.
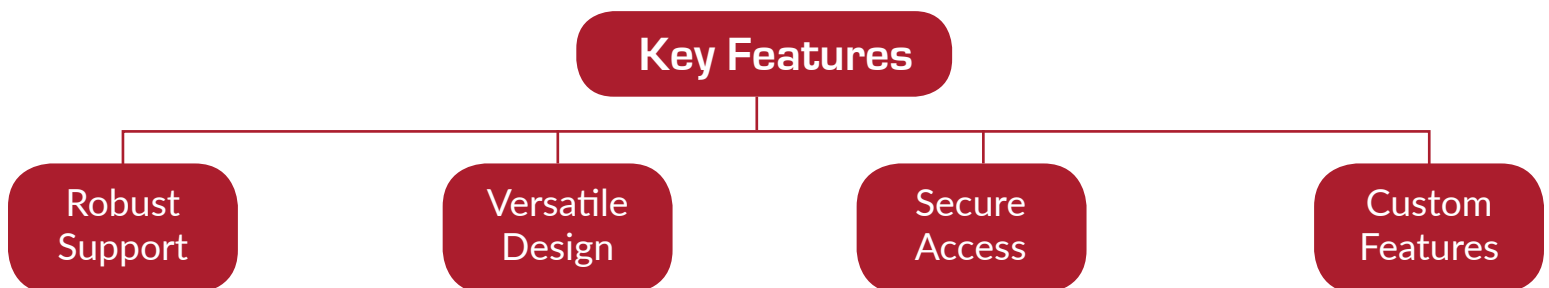

We support your supply chain needs with secure processes and real-time updates, utilizing our robust and integrative vendor management tools.

Our API works with your existing software solutions to deliver accurate, up-to-date information and a seamless user experience. We support a variety of database, finance, HR, & CRM platforms such as:

- ADP
- Domo
- Intuit
- Quickbooks
- Jasper
- Microsoft Dynamics
- Oracle
- PeopleSoft
- SAP
- Salesforce
- Tableau

... and much more

Industry Leading Restful Service

The ConnXus API is created using RESTFUL service. This protocol is an easy-to-implement, scalable industry standard. Our online documentation allows you to conveniently test the service from the web. The technical documentation utilizes the same API methods that the ConnXus application has. API users can control the timing and parameters of their requests.

Key Features

- Robust Support
- Versatile Design
- Secure Access
- Custom Features

CONNXUS® Registration Portal

Smart Technology & Training

We make it easy for current and potential suppliers to register with you. Our registration portals are equipped with an automated supplier self-update process that collects up-to-date business certificates and files. We ensure a seamless transition of your existing supplier data with virtual trainings, videos, and guided tutorials.

User Friendly Configurations

Each portal is fully equipped with configurations including custom registration fields, automatic certification expiration notifications, and a robust tagging system.
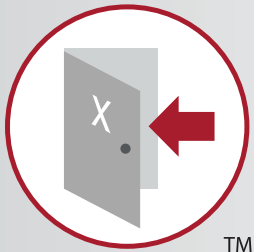

Built in VMS (Vendor Management System)

Easily configurable user permission roles

Branded to your style guidelines

Enterprise Dashboards are available for parent-child portals or multiple brands under the same brand umbrella.

For corporations with international business, global and localized portals are available. Multilingual portals are translated through local dialects, streamlining communication and reporting without the need for separate solutions. We guarantee your data won't be lost in translation.

Want a better way to register and manage your suppliers?

Email sales@connxus.com

▶ Concierge and self-service levels are available. For ongoing support and training, choose our concierge subscription, which pairs your company with a dedicated account manager.

Supplier Management Made Simple®

CONNXUS Risk Scorecard®

Financial Peace of Mind

We understand the importance of minimizing business risk. Assessing the financial stability of suppliers on an annual basis can reduce the consequences of risky business transactions. Our financial risk assessment tool helps you make better informed business decisions so you can worry less and concentrate more on growing your business.

How Does Risk Scorecard Help?

Evaluating suppliers with due diligence requires weighing the risks and benefits of every potential supplier, looking beyond their products or services. Risk Scorecard assesses a supplier's credit information and history within minutes, aggregating business data from widespread public sources to produce a unique score. This score is benchmarked against other suppliers in the industry. Additionally, our business viability score predicts the likelihood of the company going out of business based on their previous performance and history.

▶ For easy access, this comprehensive financial health tool lives right in your company dashboard, and scores appear on supplier profiles with existing Risk Scorecards.

The Buyer Benefits

- Helps identify and decrease potential business uncertainties while establishing and renewing contracts
- Scores indicate the depth, quantity and quality of the data provided from third-party sources

The Supplier Advantage

- The ConnXus Platinum® supplier development program includes access to one annual Risk Scorecard report
- You have the option to keep your scores private, public or choose which buyers can or can not see your report
- Use financial stability and high rankings to place yourself ahead of the competition

CONNXUS SmartScrub®

Data Enrichment & Validation

SmartScrub simplifies the tedious data enrichment and validation process. We process your vendor data by matching your firm's accounts payable (AP) data files or company tax identification numbers (TIN) against our robust database, **created with over 250 trusted federal, state, city and county business sources.**

SmartScrub holds the industry-leading turnaround time of 5-7 business days for domestic data, allowing you to quickly get back to business.

Tier 1 Spend Reporting

Enhance your data enrichment by adding on Tier 1 Spend Reporting, a rich report that displays the diversity and industry categories your spend is currently allocated towards.

Deliverables include a comprehensive analysis of your company's annual diverse spend, percentages of spend by supplier, industry category, geography and more.

Global SmartScrub vendor validation is available for over **130 countries** and eight diversity categories including Micro and Very Small Businesses.

SmartScrub, the data enrichment and validation software solution from ConnXus, is the only tool you need to **validate, classify and easily visualize your diverse vendor data.**

Interested in a sample SmartScrub? **Email sales@connxus.com**
